## 2. Top message

**We are committed to maximizing our client's future value and contributing to their success with our policy of fearlessly undertaking difficult social challenges and grappling with unprecedented projects.**

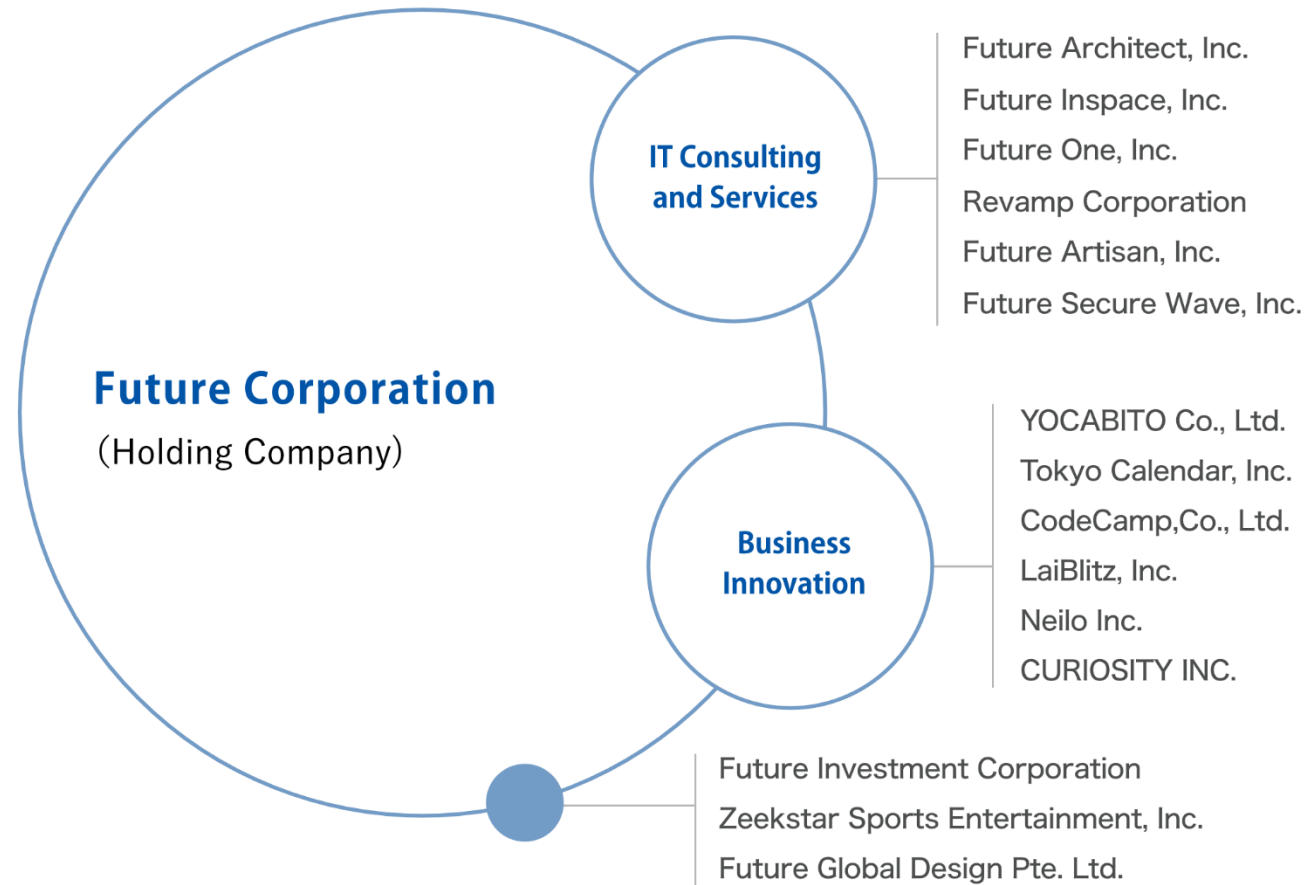

**For the last few decades, the advancements in IT have been drastically changing the landscape of our economy and society at a rapid pace on a global scale. Since its inception in 1989, Future Group has been expanding its business in the Japanese market with its unique approach to IT consulting service.**

**As a reliable partner to CxO level clients, our approach is not only to discuss and identify their ideal business goals but also to help realize these goals through successful system development utilizing our highly skilled employees who are proficient in a wide range of cutting-edge technologies. With this consistent approach, we are committed to maximizing our clients' future value and contributing to their success. We are always up for a challenge and willing to undertake and grapple with unprecedented and innately difficult projects.**

**On a separate note, our transition to a holding company structure in 2016 enabled us to strengthen collaboration and generate synergies among our group companies, thereby making us further unique and outstanding in the Japanese market.**

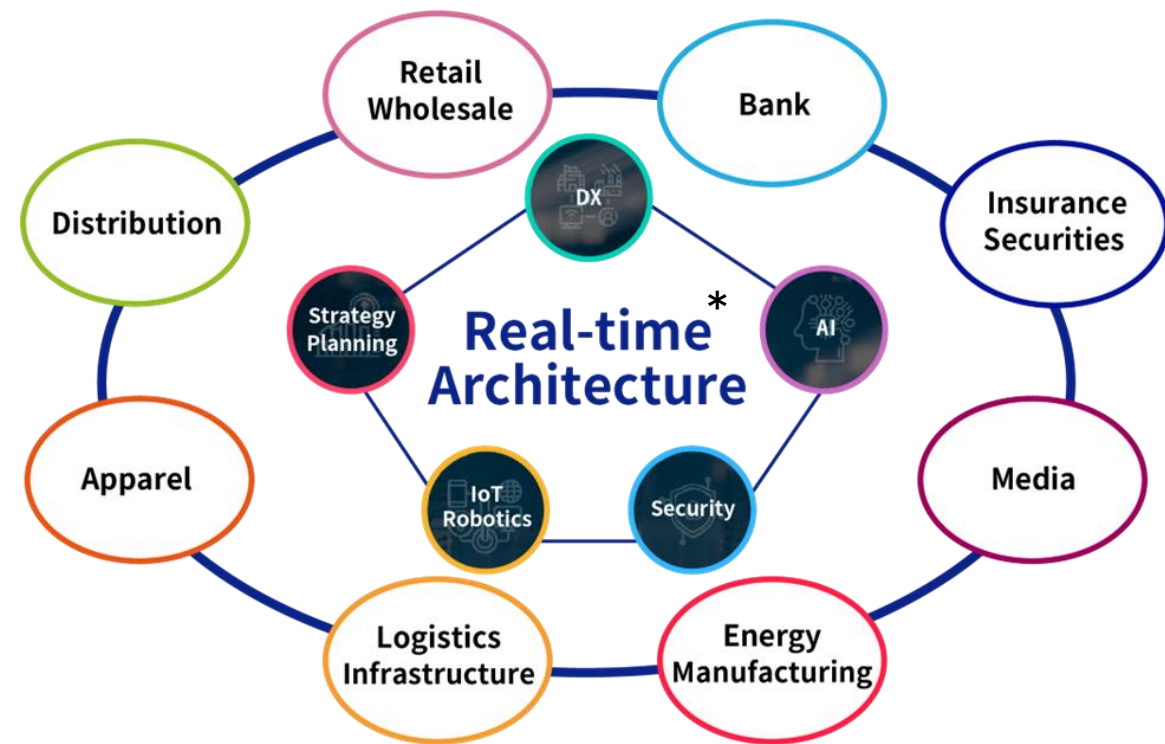

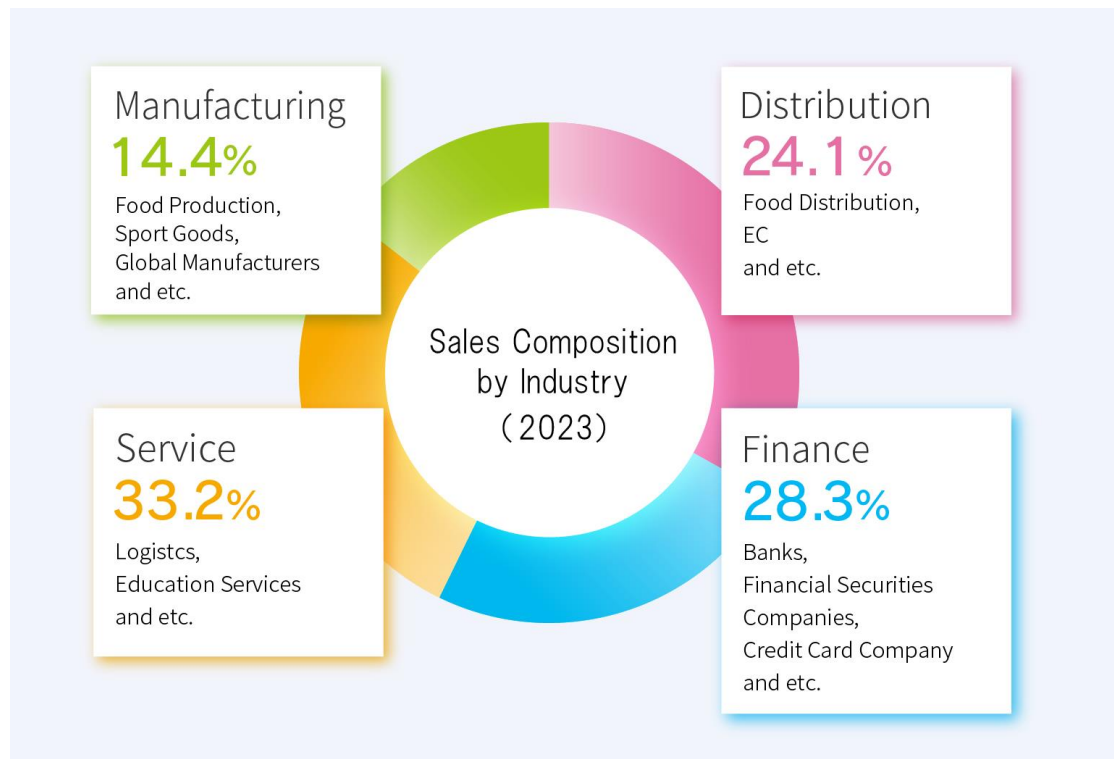

# 3. Business segments

- Future divides its business into two segments:  
“IT Consulting & Services” & “Business Innovation”

## 4. Industries and clients

- We have established strong relationships with the clients in various industries over many years.
- We are particularly strong when our client has difficulty in processing vast amounts of data in real time(e.g. wholesaler, logistics company, financial institution, foreign exchange platform).

\*Our core competence is to enable our clients to process vast amounts of data in real time.

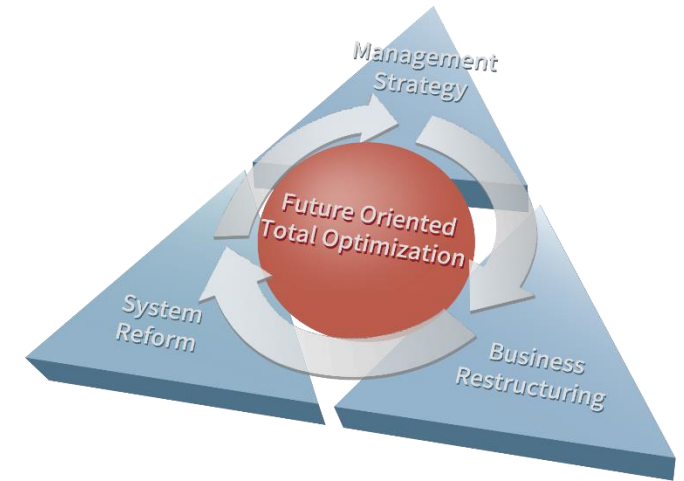

## 5. Future's strength①

We adopt a **holistic approach** to design and develop clients' business strategy, their operation, and the appropriate system architectures in an integrated manner.

The systems that we design and develop are nowhere near siloed and/or fragmented ones which would hinder our clients from having smooth and seamless experience.

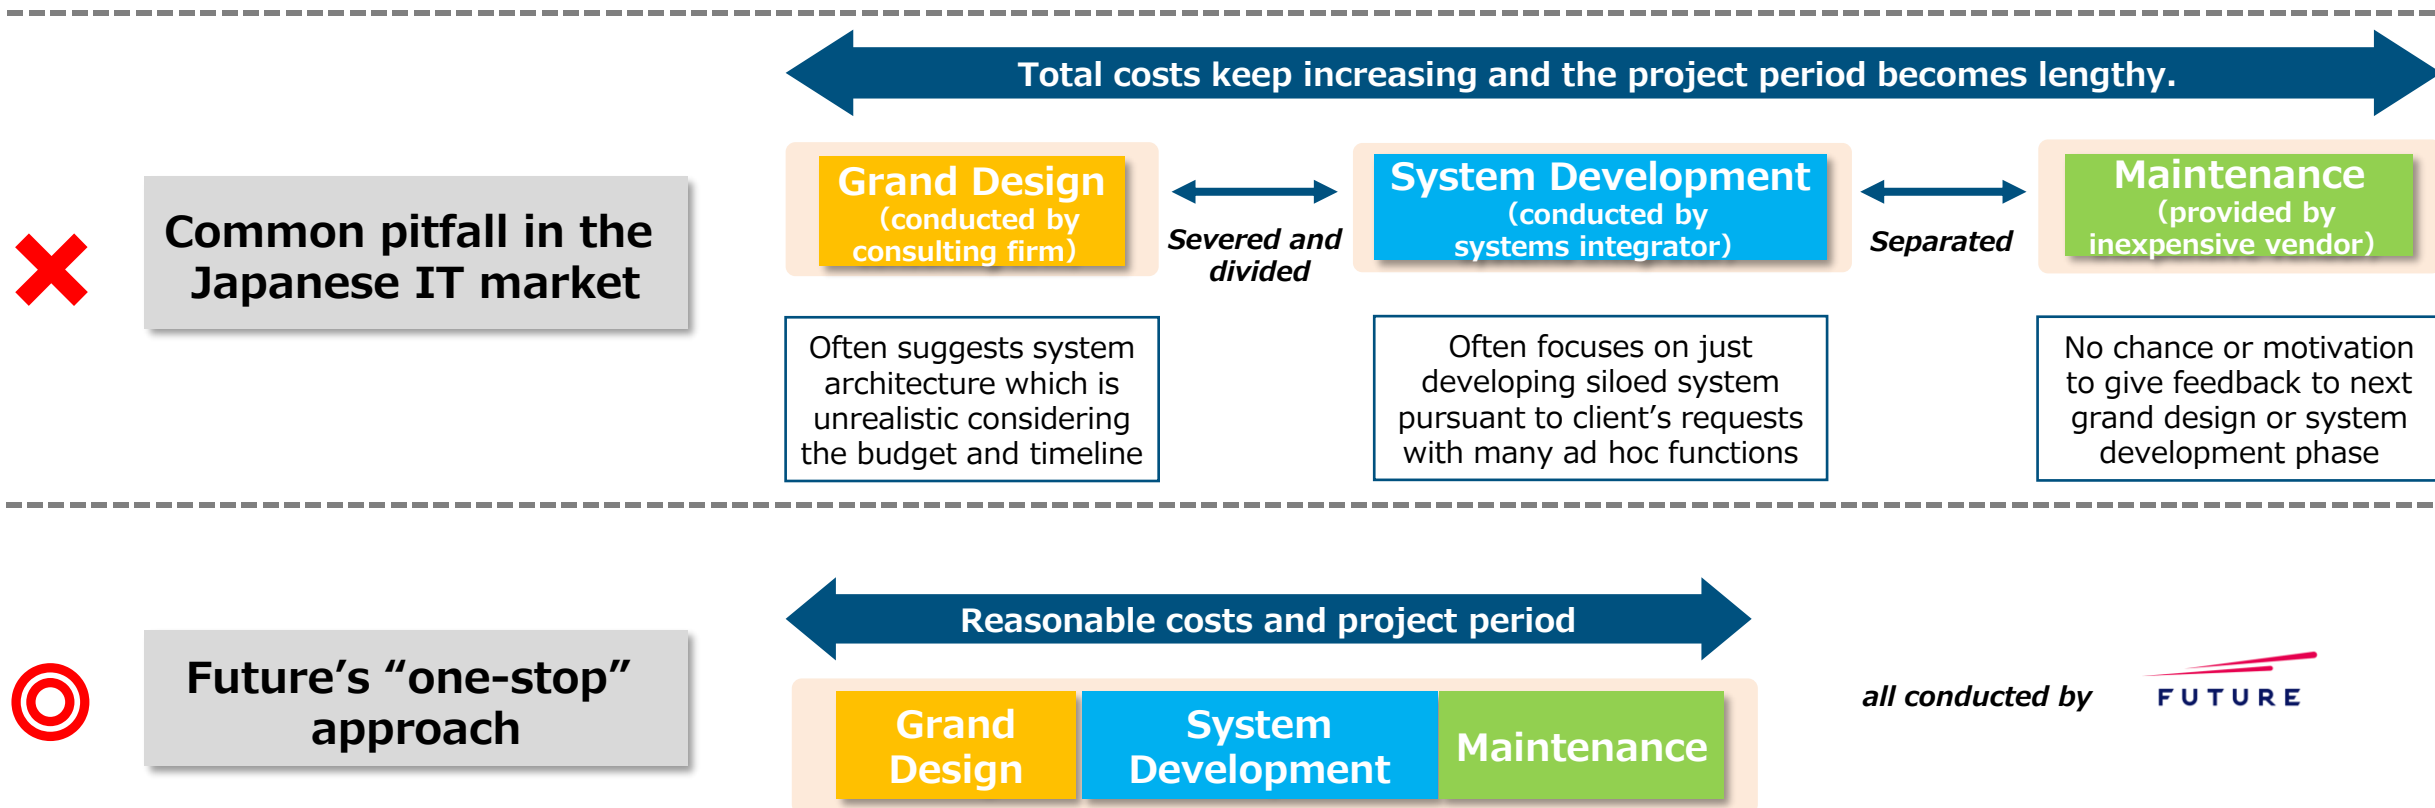

We provide IT consulting service from a **vendor-independent** and **future-oriented** standpoint.

As a reliable partner to CxO level clients, we don't merely resell or rely on specific vendors' products. We are a group of vendor-independent consultants and engineers who are committed to realizing the best possible system architectures for our clients so that they can maximize their future value.

## 5. Future's strength②

We can provide our clients with “**one-stop**” service; i.e., we are responsible for and able to handle all aspects of system development stream (Grand Design, Design, System Development, and Maintenance and Support).

**FUTURE**
