

Future Architect Launches “DX Human Resource and Organization Development Service” Supporting insourcing of DX promotion through both SoE and SoR

Future Architect, Inc.
TOKYO, Japan, April 25, 2022 / Future Architect, Inc.

Future Architect, Inc. (Headquarters: Shinagawa-ku, Tokyo; President: SHINGU Yuki; hereinafter, “Future Architect”), a main operating company of Future Corporation (Securities Code: 4722), will start full-fledged provision of its “DX Human Resource and Organization Development Service” in April 2022. The service is designed to support in-house human resource and organizational development aimed at transforming business using digital technology, otherwise known as “DX.” Experts in a variety of fields can help create the right organization and drive DX in-house, based on the issues the customer is facing.

In order to realize DX, it is essential to redesign the business model with a view to the future, implement services using optimal IT technologies, and possess the human resources and organization necessary to lead these efforts.

The DX Human Resource and Organization Development Service is a development program that integrates and systemizes the knowledge and know-how accumulated by Future Architect. It is organized in stages so that everything from analysis of the current situation to problem extraction, formulation of an action plan, and execution, can be realized for Systems of Engagement (SoE) and Systems of Record (SoR), two areas necessary for DX promotion.

About: Future Corporation

Future Group is a company that conducts "IT Consulting & Service Business" and "Innovation Business" through the use of latest technology. Since the founding in 1989, we have designed and improved the business of our clients through developing systems that integrates business management with IT. Our clients are from various industries including Finance, Manufacturing, Distribution and Logistics. We have also created our own new services based on the know-how we have accumulated in this process. We are contributing to the society by promoting innovation and creating new values for clients that is based on the strengths of "connoisseurship" and "implementation ability" of latest technologies such as AI and robotics.
