

Full-Scale Entry Into the Digitalization Business in the Medical Field With the Launch of the PHR Software Platform - Supporting the realization of “new patient-centered medicine” based on their own health and medical data -

Future Corporation
TOKYO, Japan, December 13, 2022 / Future Corporation

On December 1, 2022, Future Corporation (Headquarters: Shinagawa-ku, Tokyo; Chairman and President, Group CEO: KANEMARU Yasufumi; hereinafter, “Future”) originally developed and launched Future Medical Base, a software platform for safely and rapidly deploying Personal Health Record (PHR) services to medical institutions and pharmaceutical companies. This marks our full-scale entry into the digitalization business in the field of medicine.

Future Medical Base is a software platform that supports “new patient-centered medicine” in which patients proactively engage with medical care based on their own health and medical data. It features a robust security system that adheres to guidelines from the Ministry of Health, Labour and Welfare, the Ministry of Economy, Trade and Industry, and the Ministry of Internal Affairs and Communications for identity management, authentication, and record-keeping of PHR data. Furthermore, it has high scalability that enables flexible linkage with the “HL7[®] FHIR[®]” medical data linkage standard and other standards through an API (Application Programming Interface).

Future provides end-to-end support for the entire PHR service, from strategy consulting to IT implementation, helping our service provider customers quickly and safely provide PHR services that make full use of their business characteristics.

About:Future Corporation

Future Group is a company that conducts "IT Consulting & Service Business" and "Innovation Business" through the use of latest technology. Since the founding in 1989, we have designed and improved the business of our clients through developing systems that integrates business management with IT.
