

## **YDC Strengthens Support for Digitalization of Analog Operations at Manufacturing Sites**

### **Achieving the rapid and steady promotion of DX through cooperation with the “Koredy” IoT device**

YDC Corporation  
TOKYO, Japan, June 19, 2024 / YDC Corporation

YDC Corporation (Headquarters: Shinagawa-ku, Tokyo; President: TANAKA Takeshi) and G&J Co., Ltd. (Headquarters: Setagaya-ku, Tokyo; Representative Director: JIKIHARA Kohei) will begin collaboration in the IoT field for the manufacturing industry on June 20, 2024.

In order to promote DX, it is necessary to envision digital strategies linked to management strategies, and implement digital technologies based on a thorough understanding of overall operational processes at manufacturing sites. However, these are mostly addressed through individual improvement efforts, and at present, the optimization of manufacturing as a whole has not been achieved.

Through this collaboration, YDC, which has a substantial track record of introducing systems to "solve issues related to real data in the manufacturing industry" and has more than 25 years of expertise in system creation, and G&J, which has knowledge related to data acquisition at manufacturing sites, will uncover implicit knowledge at manufacturing sites and steadily expand the scope of the implementation of digital technologies through rapid agile trials covering processes from the acquisition of actual data to effectiveness verification.

#### ■ Company introduction

YDC is a consulting and systems integrator company founded in 1972. It designs the optimal IT systems for customers and provides consulting and system services that enhance added value in the fields of “design,” “manufacturing,” and “logistics.”

#### About: Future Corporation

Future Group is a company that conducts "IT Consulting & Service Business" and "Innovation Business" through the use of latest technology. Since the founding in 1989, we have designed and improved the business of our clients through developing systems that integrates business management with IT. Our clients are from various industries including Finance, Manufacturing, Distribution and Logistics. We have also created our own new services based on the know-how we have accumulated in this process. We are contributing to the society by promoting innovation and creating new values for clients that is based on the strengths of "connoisseurship" and "implementation ability" of latest technologies such as AI and robotics.
