

Future Begins Consulting for Programmed Medical Device Development Streamlining SaMD development and pharmaceutical approval to support social implementation of new medical services

Future Corporation
TOKYO, Japan, August 21, 2024 / Future Corporation

Future Corporation (Headquarters: Shinagawa-ku, Tokyo; Chairman and President, Group CEO: KANEMARU Yasufumi; hereinafter referred to as “Future”) starts new support service with consultants who have expertise in SaMD R&D, manufacturing, and sales from August 2024, with the aim of promoting the practical application of programmed medical devices (Software as Medical Devices, SaMD).

With the two axes of Medical DX Business and Digital Innovation Business, Future’s Healthcare Innovation Group is promoting the digitalization of the medical and healthcare fields with its IT expertise as a base. In Medical DX Business, we work with medical and research institutions to improve the digital transformation (DX) of hospital management and clinical operations, and in Digital Innovation Business, we collaborate with medical device companies and pharmaceutical companies to create new medical services.

We have several development achievements, including a cognitive function testing application that uses eye-tracking technology (trade name: MIREVO® , approval number: 30500BZX00235000), which has received medical device manufacturing and marketing approval, and an ophthalmic disease treatment support system. Based on this know-how, we help our clients in creating value not only in the medical device and pharmaceutical regulatory affairs and insurance areas, but also in a wide range of IT and business areas, thereby helping accelerate the implementation of new medical services in society.

■ Features of consulting service for programmed medical device development

- Promote DX in the development environment and shorten development cycles through data utilization
- Negotiate with development vendors and support technical aspects such as the use of AI, IoT and other cutting-edge technologies
- Support studies that require expertise, such as cybersecurity measures and clinical trial settings
- Establish digital-specific monetization and promote commercialization
- Support building relationships with research institutions, overseas companies, etc.

Future has obtained registration as a medical device manufacturer and the second-class marketing license for medical devices.
Medical device manufacturer: 13BZ201433, Second-class medical device marketing authorization holder: 13B2X10480,
ISO/IEC 27001:2013, ISO 13485:2016

About: Future Corporation

Future Group is a company that conducts "IT Consulting & Service Business" and "Innovation Business" through the use of latest technology. Since the founding in 1989, we have designed and improved the business of our clients through developing systems that integrates business management with IT. Our clients are from various industries including Finance, Manufacturing, Distribution and Logistics. We have

also created our own new services based on the know-how we have accumulated in this process. We are contributing to the society by promoting innovation and creating new values for clients that is based on the strengths of "connoisseurship" and "implementation ability" of latest technologies such as AI and robotics.
