Future Architect Updates the System Infrastructure of "Gaika NEXT neo," Gaitame.com's Over-the-Counter FX Service
Selecting the optimal technology to double execution speed

Future Architect, Inc.
TOKYO, Japan, April 18, 2025 / Future Architect, Inc.

Future Architect, Inc. (Headquarters: Shinagawa-ku, Tokyo; President: TANIGUCHI Tomohiko; hereinafter, "Future Architect"), a main operating company of Future Corporation (Securities Code: 4722), updated the system infrastructure of "Gaika NEXT neo", a foreign exchange margin trading (hereinafter, "over-the-counter FX") service provided by Gaitame.com Co., Ltd. (Headquarters: Minato-ku, Tokyo; President: TAKEUCHI Jun; hereinafter, "Gaitame.com"), and it commenced operation in February 2025.

As an IT strategy partner of Gaitame.com, Future Architect has been providing systems support and consulting services to help grow the client's business, including constructing the Gaika NEXT neo system in 2013 and upgrading the infrastructure in 2017.

With this latest infrastructure upgrade, Future Architect selected the most appropriate technology with the highest priority placed on stable system operation, taking into consideration improvements to communications between data centers and covered financial institutions, hardware upgrades, and software and middleware updates. As a result, significant improvements were achieved in various service level management indicators, such as a doubling* of execution speeds, an increase in capacity, including CPU usage rate during periods of concentrated trading, and a reduction in the time required for daily and weekly processing. Future Architect will continue to support the provision of mission-critical services by supporting the core and information systems of this highly reliable FX service that enables high-speed trading.

* Comparison of the median transaction times for weekly trading between the old and new platforms.

About：Future Corporation
Future Group is a company that conducts "IT Consulting & Service Business" and "Innovation Business" through the use of latest technology. Since the founding in 1989, we have designed and improved the business of our clients through developing systems that integrates business management with IT. Our clients are from various industries including Finance, Manufacturing, Distribution and Logistics. We have also created our own new services based on the know-how we have accumulated in this process. We are contributing to the society by promoting innovation and creating new values for clients that is based on the strengths of "connoisseurship" and "implementation ability" of latest technologies such as AI and robotics.
