

## **New Version of ESG Management Platform “Kkuon” Calculates Emissions on a Product-By-Product Basis**

**Providing basic Scope 1 and 2 functions free of charge to support decarbonization management for the entire supply chain from the early stages**

Future Artisan, Inc.  
TOKYO, Japan, October 30, 2025 / Future Artisan, Inc.

Future Artisan, Inc. (Headquarters: Shinagawa-ku, Tokyo; President: TANAKA Takeshi) has launched the latest version of “Kkuon,” a cloud platform that supports the visualization and management of greenhouse gas (GHG) emissions. With this upgrade, it is now possible to respond quickly to requests from the supply chain to disclose emissions on a product-by-product basis with more accurate data.

### **New functions and value provided**

- Kkuon has a new “proportional calculation function” that registers and centrally manages GHG emission factors (emission intensity) for each product, automatically calculating emission factors from Scope 1, 2, and 3 GHG emissions. This will greatly improve the accuracy and efficiency of GHG emissions management across a company. It also includes a “product intensity sharing function” that allows emission factors to be shared with suppliers. By utilizing the shared emission factors, the precision of Scope 3 (Category 1: Purchased goods and services) calculations is improved.
- By providing basic functions specialized in Scope 1 and Scope 2 calculations free of charge, we will support companies and suppliers in effortlessly working towards decarbonization from the early stages.

In addition to providing Kkuon, we also offer specialized consulting services related to GHG calculation, reduction, and disclosure, and have built an integrated support system for everything from strategic design to on-site implementation support.

### **About: Future Corporation**

Future Group is a company that conducts "IT Consulting & Service Business" and "Innovation Business" through the use of latest technology. Since the founding in 1989, we have designed and improved the business of our clients through developing systems that integrates business management with IT. Our clients are from various industries including Finance, Manufacturing, Distribution and Logistics. We have also created our own new services based on the know-how we have accumulated in this process. We are contributing to the society by promoting innovation and creating new values for clients that is based on the strengths of "connoisseurship" and "implementation ability" of latest technologies such as AI and robotics.
