

## Future Architect and ARATA Jointly Promote Core System Renovation Project to Support DX Business Transformation

Future Architect, Inc.  
TOKYO, Japan, November 12, 2025 / Future Architect, Inc.

Future Architect, Inc. (Headquarters: Shinagawa-ku, Tokyo; President: TANIGUCHI Tomohiko; hereinafter, “Future Architect”), a main operating company of Future Corporation (Securities Code: 4722), began a full-scale project in October 2025 to upgrade the information system infrastructure and core systems that will support the digital business transformation (DX) of ARATA Corporation (Securities Code: 2733). By standardizing and automating all of ARATA’s operations, we aim to promote both business and workstyle reforms to achieve high productivity and sustainable growth. In addition, through this joint project, Future Architect will support the reskilling and in-house development of members of the System Division, enhancing ARATA’s DX driving force and self-sustaining capabilities.

Future Architect has deep knowledge of the wholesale business, as well as its systems and operations, as we were involved in the integration of systems following ARATA’s mergers between 2002 and 2005. Drawing on the knowledge acquired through consulting experience at a number of wholesalers, we plan to apply an independently developed framework for this project that automatically converts formats specific to the wholesale industry and realizes subsequent processing without the need for code. In advancing this project, we will promote efficient project management and quality control by utilizing AI, LLMs and a scientific approach to current system analysis.

### About: Future Corporation

Future Group is a company that conducts "IT Consulting & Service Business" and "Innovation Business" through the use of latest technology. Since the founding in 1989, we have designed and improved the business of our clients through developing systems that integrates business management with IT. Our clients are from various industries including Finance, Manufacturing, Distribution and Logistics. We have also created our own new services based on the know-how we have accumulated in this process. We are contributing to the society by promoting innovation and creating new values for clients that is based on the strengths of "connoisseurship" and "implementation ability" of latest technologies such as AI and robotics.
