

## **Future Architect Develops New System Using Generative AI in Collaboration with Gunma Bank Transfer of know-how and productivity improvements in loan operations**

Future Architect, Inc.

TOKYO, Japan, November 27, 2025 / Future Architect, Inc.

In November 2025, Future Architect, Inc. (Headquarters: Shinagawa-ku, Tokyo; President: TANIGUCHI Tomohiko; hereinafter, “Future Architect”), a main operating company of Future Corporation (Securities Code: 4722), began developing a new system using generative AI that is highly compatible with our strategic business system “FutureBANK,” which was introduced to The Gunma Bank, Ltd. (Headquarters: Maebashi City, Gunma Prefecture; President: FUKAI Akihiko; hereinafter, “Gunma Bank”) in 2014, in order to evolve it into a next-generation strategic platform.

This project is based on the “field test for the use of generative AI in the area of loan operations” launched jointly with Gunma Bank in 2024. As a result of repeated tuning of the AI through the field test, the effectiveness of the AI in business applications was confirmed. Now, we will develop a new system utilizing generative AI that will link to the strategic business system FutureBANK by combining our AI engineering capabilities and resources with Gunma Bank’s expertise in loan operations cultivated over many years.

Future Architect strongly promotes cutting-edge AI academic research and R&D, and offers AI consulting services that provide comprehensive support from conception to implementation. We will accelerate our customer’s digital transformation (DX) by utilizing the technical capabilities of our specialized AI team, knowledge of loan operations based on many years of experience, and abundant digital data obtained from FutureBANK, which covers a wide range of operations.

### ■ About FutureBANK

FutureBANK is a strategic operational solution that was developed based on “systems” and “consulting services” provided to more than 30 regional financial institutions across Japan. Based on an integrated customer database, this solution provides an integrated set of operational services necessary for the management of financial institutions’ branches, particularly in relation to loan operations, including sales management and contract management, as well as revenue management and productivity analysis.
