

Future Architect Names Next-Generation Banking System “InfiniBANK,” Includes Sales Support Systems and More Toward an infinite, enduring, community-based banking system

Future Architect, Inc.
TOKYO, Japan, January 19, 2026 / Future Architect, Inc.

Future Architect, Inc. (Headquarters: Shinagawa-ku, Tokyo; President: TANIGUCHI Tomohiko; hereinafter, “Future Architect”) has named its next-generation banking system, including sales support systems, “InfiniBANK” (trademark pending).

InfiniBANK is a cloud-based core business system that redefines the banking services required of regional financial institutions based on Future Architect’s experience supporting the reform of more than 30 regional financial institutions nationwide, and pursues optimization from a zero-base perspective. The main features of this system are that it organizes business processes, utilizes the latest technology, and employs an architecture that simplifies accounting functions. Since all banking services can be provided by API, it is possible to quickly and flexibly respond to system changes and expand new services. Moreover, by turning different business rules, products, and services for each bank into rule engines, it is possible to develop new campaigns and upgrade existing services in a short time and at low cost without modifying core functional programs. In addition, by centralizing the customer information that is currently dispersed across various systems, management analysis and strategy planning using real-time data become possible, and digitalization of store operations eliminates the need for dedicated counter terminals, greatly contributing to cost reduction and operational efficiency.

InfiniBANK establishes the systems, business processes, and business data required for the effective introduction and use of AI, and achieves data strategy and data governance in the AI era. It uses fully open APIs, microservice BRMS, and real-time integrated DM to provide an “AI-Ready” system that leads to results.

About: Future Corporation

Future Group is a company that conducts "IT Consulting & Service Business" and "Innovation Business" through the use of latest technology. Since the founding in 1989, we have designed and improved the business of our clients through developing systems that integrates business management with IT. Our clients are from various industries including Finance, Manufacturing, Distribution and Logistics. We have also created our own new services based on the know-how we have accumulated in this process. We are contributing to the society by promoting innovation and creating new values for clients that is based on the strengths of "connoisseurship" and "implementation ability" of latest technologies such as AI and robotics.
